## EQUETURF POLY CHOP

We have sourced the highest quality, heavy duty synthetic felt that increases cushioning and support without becoming too firm. We recommend EqueTurf Poly Chop to reduce the depth of ride, as it improves structure and cushioning in all riding arena surfaces.

It traps moisture which reduces dust and prevents your riding surface drying out and becoming loose. We believe it has an improved look and feel to rubber chop.

This is a robust additive that gives a good to soft turf type riding condition. This is our best selling additive and is often used with our EqueTurf Hair Fibre to increase firmness. It can be added to any current surface to improve condition. Mixed with high quality silica sand, it can take a lot of usage before it needs to be harrowed.

We source our material only from fully traceable post-industrial materials. The fibre is a pale neutral colour and it is chopped to the ideal size for equestrian usage.

EqueTurf Poly Chop is superior to other similar looking products on the market. We never, EVER use material from recycled felt that was reclaimed from previously laid flooring. This reclaimed stuff may look the same, but it often contains unexpected nasties like carpet glue, rot or contamination. Reclaimed felt and mixed fibres tend to break down quickly and can be very disappointing. Ask for a sample and compare – you'll see the difference for yourself and in the long term you'll be glad you did.

EASY INSTALLATION

PROVIDES EXCELLENT CUSHIONING

GREAT FOR BUSY SURFACES
